

Course Title: Electric Circuits (B)  
Code: 18874  
Centre: Sciences Faculty  
Degree: Physics  
Fall 2017-Spring 2018  
Type: Common background  
Credits: 6

## **COURSE TITLE**

Electric Circuits

### **1.1. Course number**

Boston University

### **1.2. Content area**

Electronics

### **1.3. Course type**

Common Background

### **1.4. Course level**

Undergraduate

### **1.5. Year**

2<sup>nd</sup> (BU)

### **1.6. Semester**

2<sup>nd</sup> (Spring Semester)

### **1.7. Credit allotment**

6

### **1.8. Prerequisites**

None. *Recommended: Electromagnetism I and II* for UAM students.

### **1.9. Minimum attendance requirements.**

It is compulsory to assist to all lecture sessions. The maximum laboratory sessions allowed to be missed is one, which will be evaluated with 0 points.

Course Title: Electric Circuits (B)  
Code: 18874  
Centre: Sciences Faculty  
Degree: Physics  
Fall 2017-Spring 2018  
Type: Common background  
Credits: 6

## 1.10. Faculty data

Lecturer Alejandro Braña de Cal (Theory Coordinator)

Department: Applied Physics

Faculty: Sciences

Office - Module 12-404-I

Phone: +34 914974923

Email: [alejandro.brana@uam.es](mailto:alejandro.brana@uam.es)

Office hours: After agreement via email.

Lecturer Basilio Javier García Carretero (Lab Coordinator)

Department: Applied Physics

Faculty: Sciences

Office - Module 12-602

Phone: +34 914974005/4915

Email: [basilio.javier.garcia@uam.es](mailto:basilio.javier.garcia@uam.es)

Office hours: After agreement via email.

Lecturer Daniel Jaque García

Department: Materials Physics

Faculty: Sciences

Office - Module 04 -511

Phone: +34 914976424

Email: [daniel.jaque@uam.es](mailto:daniel.jaque@uam.es)

Office hours: After agreement via email.

Lecturer José Manuel Merino Álvarez

Department: Applied Physics

Faculty: Sciences

Office - Module 12- 404-III

Phone: +34 914973731

Email: [josem.merino@uam.es](mailto:josem.merino@uam.es)

Office hours: After agreement via email.

Lecturer José Luis Plaza Canga-Argüelles

Department: Materials Physics

Faculty: Sciences

Office - Module 04 -603

Phone: +34 914978980

Email: [joseluis.plaza@uam.es](mailto:joseluis.plaza@uam.es)

Office hours: After agreement with the Lecturer in the classroom or via email.

Course Title: Electric Circuits (B)

Centre: Sciences Faculty  
Degree: Physics  
Fall 2017-Spring 2018  
Type: Common background  
Credits: 6

## 1.11. Course objectives

- o To understand the fundamental and theoretical aspects concerning the behavior of electronic circuits, as well as the different elements of design and their operating modes.
- o To be aware of the roles played in circuits by both discrete components (resistors, capacitors, diodes, etc.) and integrated components (operational amplifiers, converters).
- o To learn how to apply the basic techniques of analysis to evaluate the performance of a circuit.
- o To know the basics of analog electronic systems and applications of the operational amplifier.
- o To understand specifications, parameters and constraints, to recognize the functionality of a circuit and choose the most appropriate for a particular application.
- o To have the physical foundations needed to interpret, select and evaluate the implementation of new scientific and technologic concepts and developments related to electronics.
- o To learn independently new knowledge and techniques suitable for the design, development or exploitation of components, circuits and electronic systems.
- o Using computer applications to support the analysis and development of electronic systems.
- o To be trained in the use of computer aided design tools for both, simulation and test of electronic circuits.

## 1.12. Course contents

- 1 - Linear circuits I: DC networks
  - 1a.- Circuit elements. Kirchoff's laws.
  - 1b.- Circuit solving methods.
  - 1c.- Linearity and superposition.
  - 1e.- Thevenin and Norton equivalents.
  - 1f.- Maximum signal transfer between circuits.
- 2 - Linear circuits II: AC networks
  - 2a.- Sinusoidal steady state analysis
  - 2c.- Impedance and phasor analysis.
  - 2d.- Theorems and Laws in AC domain
  - 2e.- Power calculations
  - 2f.- Filters
- 3 - Introduction to analog electronics
  - 4a.- Operational Amplifiers
  - 4b.- Analog to digital conversion (A/D).
  - 4c.- Digital to analog conversion (D/A).
  - 4d.- Diodes
- 4- Transient Analysis
  - 3a.- 1<sup>st</sup> order RL and RC circuits
  - 3b.- Natural and Step Response of 2<sup>nd</sup> order RLC circuits

Course Title: Electric Circuits (B)  
Code: 18874  
Centre: Sciences Faculty  
Degree: Physics  
Fall 2017-Spring 2018  
Type: Common background  
Credits: 6

## 1.13. Course bibliography

### **Textbooks on Theory of linear circuits:**

“Electric circuits”, J.W. Nilsson and S.A. Riedel. (Prentice Hall)

“Fundamentals of Electric Circuits” C. Alexander and M. Sadiku 5<sup>th</sup> Ed (McGraw-Hill)

### **Textbooks on Electronic circuits:**

“Electronics”, A.R. Hambley. (Prentice Hall, Pearson Education).

“Electronic Circuit Analysis and Design”, D.A. Neamen, vol.1-2 (McGraw-Hill).

“The Art of Electronics”, P. Horowitz and W. Hill. (Cambridge Univ. Press).

## 2. Teaching methodology

Teaching methods and learning of this subject include lectures, problem solving sessions, individual tutorials and laboratory practical sessions.

During the lectures, the Lecturer will explain the fundamentals of electric and electronic circuit analysis and design, in addition to the fundamental principles of the most common circuits and devices. This presentation of the basic principles is accompanied by illustrative examples about the use of techniques and device practical applications.

In problem solving sessions, the Lecturer will partially solve exercises which will be proposed in advance, in such a way that the students will be able to solve the difficulties encountered when facing them. Some problems should be solved and later explained by the students themselves during these sessions.

The individual tutorials will enable the students to clarify doubts and difficulties found both during the study of the theoretical principles and in their practical application.

The laboratory includes eight guided sessions. Students will have to simulate, mount and measure different illustrative circuits taken from the theoretical background previously given to the student. Each laboratory session will include preparatory homework, laboratory work and finally, writing a short report about the previously done work.

Course Title: Electric Circuits (B)  
Code: 18874  
Centre: Sciences Faculty  
Degree: Physics  
Fall 2017-Spring 2018  
Type: Common background  
Credits: 6

### 3. Student workload

		hours	hours
Presential	Lecture sessions	40 h	76 h
	Laboratory sessions	22 h	
	Others (problem solving in classroom)	8 h	
	Exams	6 h	
At home	Home study and problem solving	50 h	74 h
	Others (lab session preparation and report writing)	24 h	
<b>Total workload 25 h x 6 ECTS</b>		<b>150 h</b>	

### 4. Evaluation procedures and marks

The evaluation of this course will be based on several items: marks for three intermediate exams (when completing about a third, two thirds and three thirds of this program, respectively) the obtained marks in the laboratory sessions and the final exam marks:

- Lecture content exams and laboratory sessions, will be evaluated on a 10 points basis.
- The final marks for this course will be obtained from exams and laboratory marks by using the following equation:

$$\text{Final marks} = 0.6 * \text{exams} + 0.4 * \text{Lab Sessions}$$

In order to pass this course it is compulsory to obtain marks above or equal to 5 points, both in the exams and in the laboratory parts. Should this condition not be accomplished, the final mark obtained by the above calculation will be truncated up to a maximum of 4 points.

- The marks corresponding to the lecture contents exams will come from the following formula

$$\text{Exams} = \text{Max}(\text{mean IF}, \text{final})$$

- ✓ Where  $\text{mean IF} = 0.4 * \text{average of intermediate exams} + 0.6 * \text{final}$
- ✓ The evaluation of a missed exam will be zero points.
- ✓ The marks obtained for active participation in the problem solving sessions could be used to improve the exams marks up to two points.

Course Title: Electric Circuits (B)  
Code: 18874  
Centre: Sciences Faculty  
Degree: Physics  
Fall 2017-Spring 2018  
Type: Common background  
Credits: 6

- The final marks for the laboratory will come from the averaged marks of all of them.
  - ✓ A maximum of one laboratory session could be missed being evaluated with zero points.
  - ✓ More than one laboratory session missed will result in failing to pass this course.
- Missing the final exam will result in obtaining a “Non evaluated” marks.
- If only laboratory part is passed, the marks will be maintained only for the extraordinary call of the same academic year.
- If laboratory session evaluation is failed, a special laboratory session will be settled as a practical exam in the extraordinary call.

## 5. Course calendar (\*)

Contents	Attending hours (Lecturing + Problems)	Horas no presenciales
Chapter 1	14 (12+2)	9
Chapter 2	13 (12+1)	7
1 <sup>st</sup> MidTerm	1	
Chapter 3	11 (9+2)	7
2 <sup>nd</sup> MidTerm	1	
Chapter 4	9 (8+1)	6
3 <sup>rd</sup> MidTerm	1	
Lab Sessions	22	15
Final Exam	3	15
Extraordinary Exam	3	15

\* This calendar is only an estimate.
