

## Recommended Profile

The Master's Degree in Mathematics and its Applications is aimed at students who finished a degree in **Mathematics** or another degree from a Spanish or foreign university which is part of the European Higher Education Area and would allow students to begin a postgraduate programme in their own country.

Students from universities in any country can also apply to the Master's Degree in Mathematics and its Applications if they have a degree in Mathematics or a related field such as Engineering, Physics etc.

This Master's Degree has two fields of specialization:

- **Introduction to Research:** mainly aimed at those who wish to continue with doctoral studies in Fundamental Mathematics.
- **Applications of Mathematics:** aimed at those who wish to further their knowledge of the use of or research into Mathematics in industry, technology or other fields of mathematical application.
