

Recommended Profile

Students on this Master's Degree should have a profile based on a high degree of interest in ecological administrative and social questions related to bodies of inland water both in their home countries and in the European Union. Students should preferably have already studied some subjects related to the ecology of inland waters and some scientifically oriented subjects (Chemistry, Physics, Mathematics, Biology). Ideally, students will have written their degree dissertation (or its equivalent) about a water related question. Students should be able to communicate effectively in English and if they have had an Erasmus scholarship that will be valued positively.
