Master’s Degree in Bioinformatics and Computational Biology

**Recommended profile**

The master's degree is aimed at students who have obtained an official university degree and who wish to specialize in Bioinformatics.

New students in the master's degree in Bioinformatics and Computational Biology may basically come from two different profiles: (1) profile related to the field of Life Sciences, such as graduates in Medicine, Biology or Biochemistry and (2) technological profile, mainly graduated in Computer Engineering and other areas related to Information and Communication Technologies (ICT), as well as other degrees of Science, especially Physics and Mathematics or Statistics.
