General remarks for programming:
1. For every interview, including a screening interview that doesn’t lead to a completed interview, the telephone prefix number has to be stored.
2. The filter programming assumes that there are no blanks, except if a question is filtered out, and that a blank is not coded as a number (like 0). No filter condition should ever be true, based on a blank.
3. The filter programming includes a number of redundant conditions (hoping that this may avoid mistakes due to later changes).
A) Screening

0 Last birthday method

[The introduction may be adjusted by each institute. It is recommended to introduce the study (at least in S1) as dealing with work-life issues in general, so that every respondent is likely to show interest, not with job mobility. Here a suggestion:] Hello!

The University of [university name] is organizing a study to understand the issues with combining personal and professional life and we, [institute name], are calling. Your household has been randomly selected. All in all 7500 people will be interviewed. The information is all kept anonymous and is used for science exclusively. May I ask a few questions to see whether your household fits the criteria of the study?

[If respondent asks for more information:] If you are interested: There is a description of the study available on the internet. The address is www.jobmob-and-famlives.eu.

In this study persons who are aged between 25 and 54 should be interviewed.

How many persons between ages 25 and 54 are attached to your household, including yourself?

(Translator note: We want people who are “belonging to” the household – sleeping, eating, storing things, and receiving mail – even if they are not at home right now and even if they are not at home for many days.)

Employment Status

I would like to start with some questions concerning your professional life.

06.01 v0601 (SC0.1)

**Filter rules:** –

Do you currently have paid work that provides a significant contribution to your income?
[if the respondent is not sure whether his activity counts as a job:] This may include shorttime employment, casual work, student jobs, or military service – if it makes a difference for you in terms of your financial means. It also includes being on maternal or parental leave [in Belgium add: “... or ‘time credit’”].
[if there is another question:] We also are interested in illegal employment. And be sure that we will not report anything you tell us to any official office.

Some people frequently spend overnights away from home for job-related reasons. We do not mean night-shifts, but rather overnights due to job-related travels, seasonal work or working too far away to return home every day. In the last 12 months, have you spent nights away from home for these kinds of job-related reasons?

*[if clarification is necessary: These overnights can be in one piece – that would mean staying away from home over the course of two months. Or the overnights can be spread out over many short trips, for example two overnights every week.]*

**Explanation:** For some questions, later on in the questionnaire, *migrants* need to be filtered out. In order to then have an easy to programme and easy to understand filter instruction it is handy to have one indicator where “1” stands for “respondent is a migrant” and “0” stands for “respondent is not a migrant.” Such an indicator is computed here.

\[
\text{mob3mig} = \begin{cases}
