Ethics, Democracy and Governance: Strategic Approaches for Policy

JUNE 2-6, 2025

Management, Innovation, and Sustainability in Climate Change: Are They Compatible?

JUNE 9-13 2025

Tackling Global Education Challenges

JUNE 16-20, 2025

> *A great experience, highly recommended! Each session of the symposium was very inspiring. The teachers were excellent. The program is well balanced and up-to-date. Having the opportunity to be taught by Harvard and MIT experienced teachers is an experience that I will never forget. Moreover, the participants are very interesting people. Having the opportunity to talk with them and exchange experiences is a highlight of the program."*

IAP International Academic Initiative

The International Academic Program (IAP), in collaboration with the David Rockefeller Center for Latin American Studies (DRCLAS) at Harvard University and with institutional support from the Universidad Autónoma de Madrid (UAM), fosters lifelong learning, reciprocity in research and expands academic collaboration networks.

Held in Cambridge, Massachusetts, this program brings together distinguished professors from Harvard and MIT, alongside faculty and researchers from Latin America, Spain, and beyond. Together, they exchange ideas, explore new research directions, and enhance their teaching practices.

The symposia address pressing global challenges, including climate change, artificial intelligence and democracy, through interdisciplinary discussions and presentations. They examine how fields like public policy, public health, management, and education adapt to these challenges, contributing to transformational change in a rapidly evolving world.

The main objectives of IAP-UAM are:

1. To collaborate with a network of alliances
2. To provide individuals with high quality and inspiring academic experiences
3. To identify and work on research priorities and projects in global education
4. To identify and work on projects in priority areas within participating universities
5. To foster replicability to promote projects that can be applied in different contexts and institutions
5. To disseminate research results and programs broadly
6. To identify and share innovative practices among top rated institutions

Ethics, Democracy and Governance: Strategic Approaches for Policy

Ethics and Artificial Intelligence
MATHIAS RISSE
